

T&MSPECIALISTS LIMITED

HONG KONG 23rd June 2015. Press Release

T&M Specialists hired to provide training services on the John Hart Generating Station Project, one of Canada's most important energy generating sites.

The John Hart Generating Station, located within the City of Campbell River, has been operating since 1947. To ensure it continues to deliver clean, reliable energy for years to come, the facility is being modernized.

T&M Specialists have been hired by Normet to provide training services on the specialised Normet equipment being used on this project. Machinery being used includes 2 Normet 8100 Spraymecs.

This shows good progress for T&M Specialists, who have recently been involved in similar Training projects in New York City, and adds more services to the T&M portfolio. "We are immensely proud to be involved in such an important Canadian government-backed project and one that is so environmentally conscious" said Louis Fraser, owner and operator of T&M Specialists. "When I was asked to leave Hong Kong for a few weeks to provide such training here in Canada there was no hesitation in my reply" said Fraser.

The John Hart Generating Station Replacement Project involves building a new underground tunnel and generating station, and see the removal of three penstocks and the existing station to reduce the site's environmental footprint. Included in the project will also be a new water bypass facility to provide flow continuity below the generating station and protect the downstream fish habitat. Approximately 95 percent of the Campbell River flow passes through the John Hart Generating Station. Construction work started in spring 2014 and the project is expected to be completed by 2018/2019.

ABOUT T&M SPECIALISTS

T&M Specialists is owned and operated by Louis Fraser, a certified EFNARC Nozzleman and Examiner with over 17 years international experience in Sprayed Concrete for both initial and permanent support. T&M Specialists have been involved in many major civil projects around the world such as CTRL 240, Falkirk Millennium Wheel, Kings Cross Upgrade, CLEM 7, Airport Link, ORLT and HATS 8244 as well as various mining projects around Australia and Canada.
